

Epesi ERP application server setup guide via Terminal

1. `sudo apt-get install -y mc htop ncdu neofetch apache2 mysql-server php7.4 libapache2-mod-php7.4 php7.4-mysql`

2. Open browser and point to IP address of the server, you should see Apache welcome page

3. `cd /var/www`

Remove `index.html`, create `index.php` with context `phpinfo()` and repeat step 2.

This time you should see the `phpinfo()` page.

4. Verify needed extensions (ctrl f)

If the extensions are missing install them and enable them in `php.ini`

Path to correct `php.ini` will be shown in `phpinfo()`

5. `wget epesi.zip` latest version from SourceForge and unzip into `/var/www`

6. Using Mysql command line create new database with new user name and new password

7. Repeat step 2. this time you should get Epesi wizard setup page and follow steps and you will have Epesi running
