12-pin FFC ribbon for Raspberry Pi camera

FFC tape 12 pin 150mm 0.5 15cm type B tape

Description: AWM 20624 80C 60V VW-1

Number of pins: 12pin

Raster: 0.5mm

Tape width: about 6.5mm

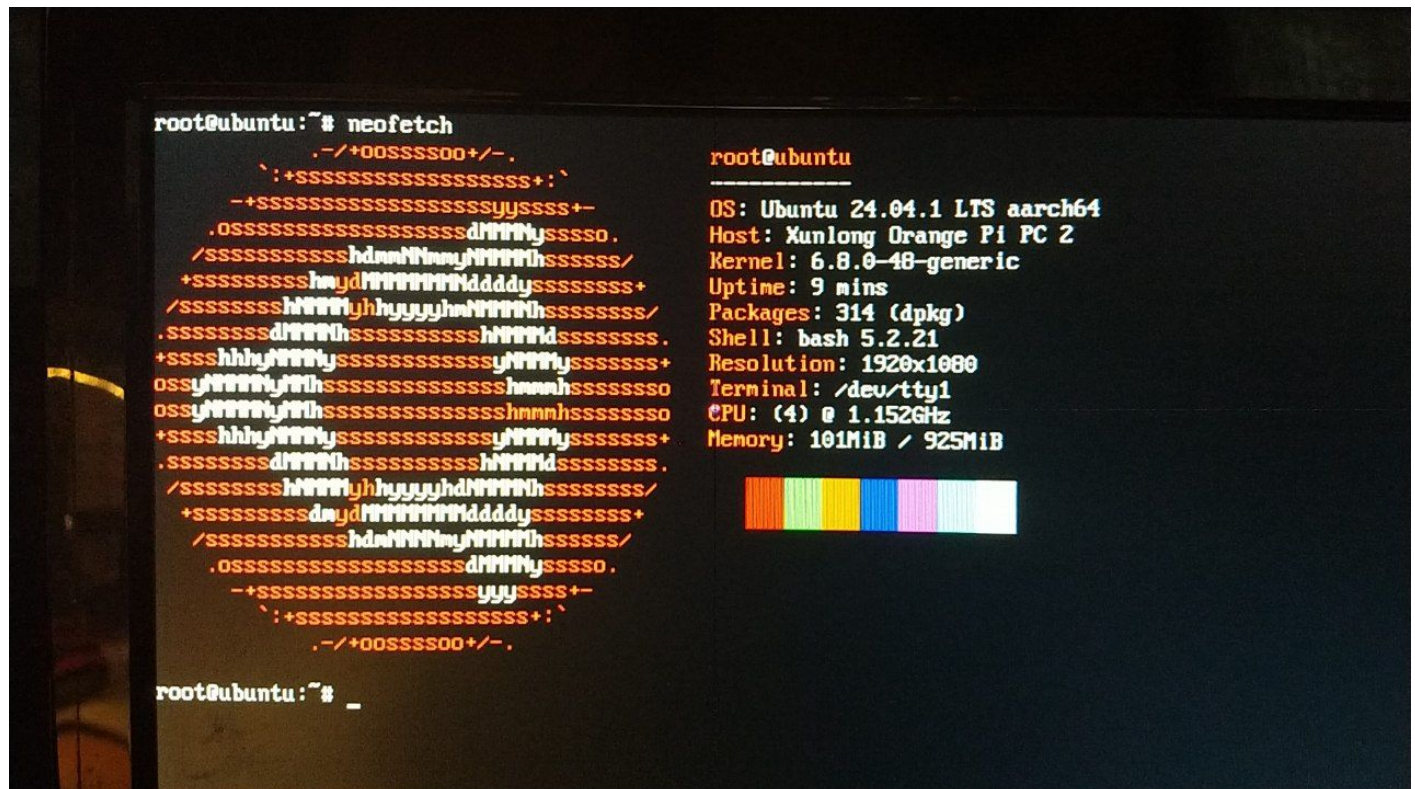

Tape length: 150mm

Orange Pi PC 2 - OS image

Orange Pi PC2 SD card images

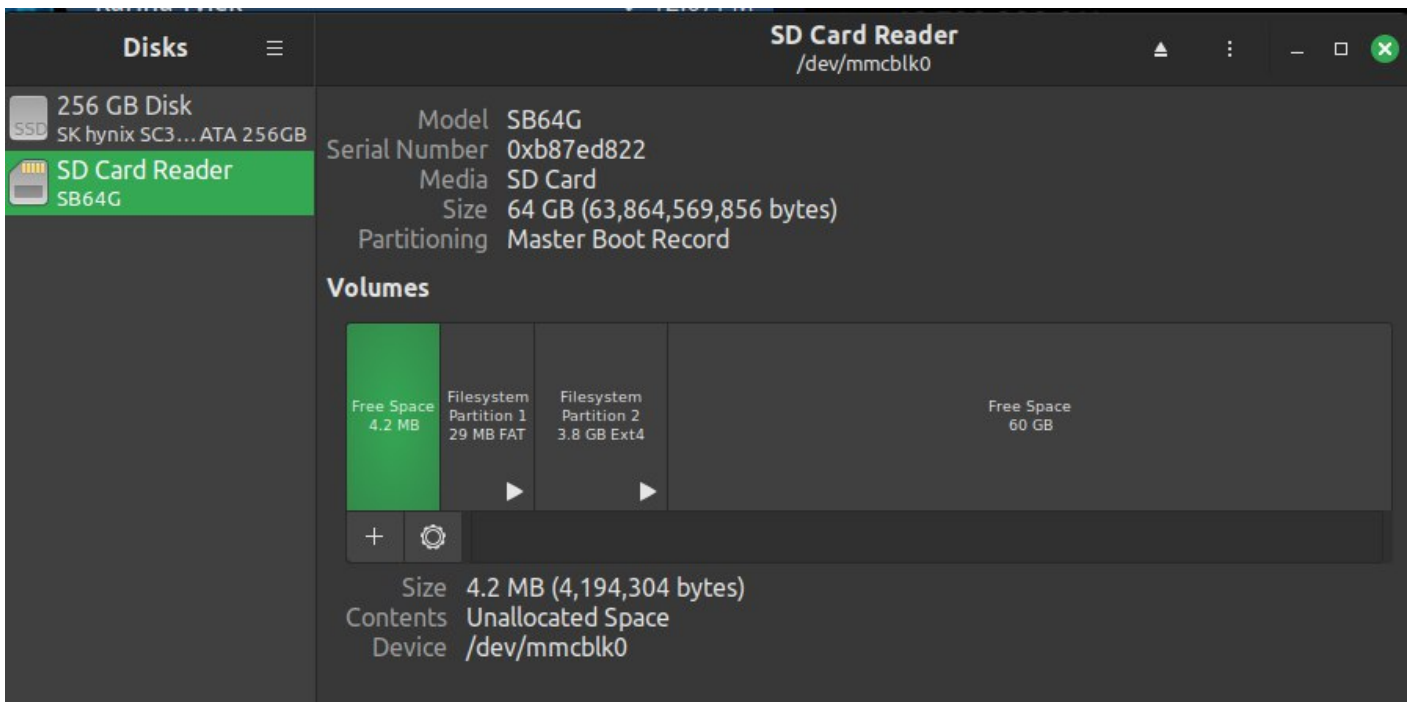

https://sd-card-images.johang.se/boards/orange_pi_pc2.html

Xunlong Orange Pi PC2 running Ubuntu 24.04 LTS

Disk layout - 64 GB but only 4 GB would be sufficient probably

It takes about 12 minutes. Unusable. 64 GB

It can be "shaved" and saved.

Truncate empty space from a raw dd image

<https://superuser.com/questions/958812/truncate-empty-space-from-a-raw-dd-image>

Check for sector sizes:

```
sudo fdisk -l '/home/user/images/test.img'
```

Units: sectors of 1 * 512 = 512 bytes

Sector size (logical/physical): 512 bytes / 512 bytes

I/O size (minimum/optimal): 512 bytes / 512 bytes

Disklabel type: dos

Disk identifier: 0x00070424

| Device | Boot | Start | End | Sectors | Size | Id | Type |
|-----------------------------|------|-------|---------|---------|------|----|-----------|
| /home/user/images/test.img1 | * | 2048 | 26623 | 24576 | 12M | e | W95 FAT16 |
| /home/user/images/test.img2 | | 26624 | 7200767 | 7174144 | 3,4G | 83 | Linux |

Use end number (7200767) as reference add 1 and * 512 like below:

```
sudo truncate --size=$((7200767+1)*512) '/home/user/images/test.img'
```

Your file should be truncated

Opposite process:

<https://serverfault.com/questions/870594/resize-partition-to-maximum-using-parted-in-non-interactive-mode>

Locale error

```
